Francois Roux
Engineering Manager
Bright Coop, Inc.
803 W. Seale Street
Nacogdoches, Texas 75964

Dear Mr. Roux:

The installation at the processing plant I visited in the United States was excellent. Moving the entire Bright Coop through the controlled atmosphere stunning eliminates stressful shackling of live birds. The system was well designed and will be easy to maintain.

The video of the induction of anesthesia showed clearly that increasing CO₂ slowly in stages resulted in birds that had a very mild reaction. There were absolutely no escape movements where the birds attempt to get out of the container. The video you showed in the conference room should be used as a training video for auditing.

Sincerely,

Temple Grandin
Professor of Animal Sciences
